Detailed description of project	Type of services provided
---------------------------------	---------------------------

The United Nations Development Programme and Global Environment Facility - Pacific Adaptation to Climate Change project is a five year regional programme on climate change adaptation, which began implementation in February 2009. The Programme is executed by SPREP, who work directly with the Federated States of Micronesia and 13 other Pacific Island Countries.

The Programme is approaching its final year of implementation and one of the key and original outputs to be produced are Demonstration Guidelines (the 'guidelines') that show integration of climate risks into the each of the country's corresponding sectors and demonstration activities.

The Demonstration Guidelines (also called Technical Synthesis Report) will be one of the key knowledge management products and deliverables of the PACC project.

The products will share and inform Pacific communities on what and how adaptation measures were trialled, piloted and carried out under each development sector addressed by PACC, at the community / municipal, regional or district and national levels. It will also showcase how partnerships were forged and challenges addressed and minimized. It will include lessons learned and best practices from the project experience.

The objective of this assignment is to develop a demonstration guideline or technical synthesis report of the PACC project for the Federated States of Micronesia. The purpose of the assignment is to lead the development process by researching, authoring and writing up the guideline or report with guidance and support from the PACC project team in FSM.

Sustainable Seas Ltd provided the following services in country:

- Develop a rough draft of the technical synthesis report;
- In-country consultations and data collection (Jan 2015);
- **Develop and deliver complete draft of the report.**

The PACC demonstration project aligns with both national and Kosrae State policy and plans. In particular, the PACC project team has actively contributed to the development of climate-responsive policy and planning for Kosrae, and the project is closely aligned with the recently revised SMP . For example, the project has carried out a great deal of awareness raising on climate change and the need for adaptation at the community level (Strategy 1); has worked to incorporate climate change risk into Regulations for Development (Strategy 2); and part of the coastal road has been relocated inland under the demonstration project (Strategy 3).

Sustainable Seas Ltd ensured that compliance to the principles of the PACC project were complied with .
