Detailed description of project	Type of services provided
<p>The Development Objective of the proposed Project is “Strengthening institutional capacity for planning and demonstration of community based wetland management and implementing a coral reef monitoring system”. The objectives of the Coral Reef Monitoring Component are to “pilot capacity building of tourist resorts to conduct coral reef monitoring and, to provide technical support for developing a technology platform (referred to as ‘the Coral Reef Monitoring Framework’) that will enable easy access to the data and decision support tools”.</p> <p>The assignment is delivered considering the general potential of the practitioners, namely tourist resorts and dive operators, and the need to provide objective evidence of links between climate change, the health of coastal and marine ecosystems and the environmental, social and economic goods and services that these coastal and marine ecosystems provide.</p>	<p>The overall services delivered by Jonathan McCue (socio-economist) of the assignment are:-</p> <ul style="list-style-type: none"> to review the draft protocols that have been prepared in the context of the objectives of the Coral Reef Monitoring Component and from an environmental and socio-economic perspective; to make recommendations to change, improve and/or add to the protocols to ensure, to the extent practicable, that they comply with international norms and in particular those of the International Convention on Biological Diversity and the Framework Convention on Climate Change and their respective protocols.
